Product Feedback Report — V3 (Confirmation)

All Critical Bugs Fixed — Re-Test Passed

March 19, 2026 | Round 3 Re-Test

Tester	Vishesh Khurana (Co-founder, Shiprocket)
Account	vishesh.khurana@shiprocket.com
Company	Shiprocket Logistics/Supply Chain Growth Stage
Testing	March 18-19, 2026 (3 sessions across 2 fix deployments)
Version	V3 — Confirms all 7 bugs resolved after second fix deployment

7.5	OVERALL	out of 10
-----	---------	-----------

Upgraded from 5.0/10 (V2) after all 7 critical bugs were resolved. Platform is now functional for real-world founder use cases.

Version	Date	Score	Bugs	Status
V1 (Initial)	Mar 18	6.5/10	5 critical bugs found	First deployment
V2 (Re-test 1)	Mar 19 PM	5.0/10	0/5 fixed + 2 new	Fixes failed, regressions
V3 (Re-test 2)	Mar 19 EVE	7.5/10	7/7 fixed (100%)	All resolved

1. Bug Resolution Summary

All 7 bugs from the V2 report have been verified as fixed. The platform is now fully functional across all core features.

Bug ID	Feature	Was	V3 Status	Verification
BUG-001	Simulation Engine	"X is not defined"	FIXED	6 scenarios + What-If + Manual all working
BUG-002	Advanced Data Input	"u.map" crash	FIXED	Toggle works. GM=45%, Churn=5% saved
BUG-003	Cap Table Persistence	Stakeholders vanish	FIXED	All 14 stakeholders persisted across sessions
BUG-004	KPI Dashboard	Infinite spinner	FIXED	Creates, loads, widget system functional
BUG-005	Churn Simulation	"X is not defined"	FIXED	Returns 50.9mo P50, 100% survival
BUG-006	Add Stakeholder	HTTP 400 error	FIXED	Add succeeds with confirmation toast
BUG-007	Dashboard Load	"v.map" crash	FIXED	Both existing and new dashboards load

2. Simulation Engine — Full Results

The Simulation Engine is now fully operational. All 6 preset scenarios, custom natural language queries, the What-If Explorer, and Manual Variable Adjustment all work without errors. Monte Carlo simulations run 500 iterations with proper P10/P50/P90 distributions.

Scenario	Decision	Score	P50 Runway	Survival	Key Insight
Cut Marketing 30%	GO	8/10	120 mo	100%	Break-even Month 1. Revenue growth is #1 sensitivity lever.
Raise Prices 20%	GO	8/10	120 mo	100%	Pricing = +10 months runway. Cash at 12mo: \$149.8M (P50).
Churn Hits 5%	GO	8/10	50.9 mo	100%	LOW confidence. 16.2mo spread (P10: 43mo, P90: 60mo).
IPO Burn Cut (custom)	GO	9/10	120 mo	100%	Highest score. 'Make the cut — unit economics support it.'

What-If Explorer

The What-If tab loads an interactive explorer with 5 real-time sliders: Revenue Growth Rate (0%, range -30% to 60%), Monthly Churn Rate (3.2%, range 0% to 20%), Gross Margin (82.4%, range 30% to 95%), Burn Rate Change (0%, range -50% to 100%), and Fundraising Amount (\$0, range \$0 to \$5M). The instant impact panel shows Runway = Sustainable, Survival (18m) = 100%, Cash at 18mo = \$182.6M.

Manual Variable Adjustment

The 'Adjust Variables Manually' button expands 3 sensitivity sliders inline: Churn Rate (0-10%), Burn Reduction (0-50%), and Price Increase (0-30%), with a 'Run Full Simulation' button.

3. Other Features Verified

Advanced Data Input

The Advanced mode toggle works without crashing. It displays a Multi-Period Metrics table with rows for Churn Rate, Gross Margin, and other metrics organized by month. During this session, Gross Margin = 45% and Churn Rate = 5% were successfully entered for January 2026 and saved ('2 metric values saved successfully').

Cap Table

- All 14 stakeholders (4 founders + 10 investors) persisted across 3 sessions — data loss bug is fully resolved.
- Add Stakeholder works reliably — tested with both Founder and Investor types, no HTTP 400 errors.
- Successfully issued 10,000,000 Common shares to Saahil Goel at \$0.001/share — equity issuance functional.
- Securities tab shows ownership percentages (Saahil Goel: 100% of 10M fully diluted shares).
- IPO Scenario 1 - Base Case (\$280M at \$1.3B pre-money) still preserved from March 18.
- Note: System does not prevent duplicate stakeholder entries — minor UX gap, not a bug.

KPI Dashboards

- Previously created 'Shiprocket Executive KPIs' dashboard loads cleanly at /dashboard/19.
- New dashboard 'Shiprocket IPO Tracker' created successfully at /dashboard/20.
- Widget system fully functional: 4 widget types (KPI Card, Line Chart, Bar Chart, Table).
- 15 metrics available: ARR, ATV, Burn Rate, Cash Balance, Churn Rate, CAC, Customer Count, CLTV, Gross Margin, Headcount, LTV/CAC, MRR, Net Burn, Revenue, Runway.
- No 'v.map is not a function' error on any dashboard page.

4. Updated Feature Scoring

Feature	V1	V2	V3	Notes
Onboarding	8/10	8/10	8/10	Stable — well-designed flow
Data Input (Simple)	7/10	7/10	7/10	Stable — works reliably
Data Input (Advanced)	0/10	0/10	7/10	FIXED — Multi-period metrics work, GM and Churn saved
AI Copilot	8/10	7.5/10	8/10	Should improve with correct GM/Churn data now entered
Simulation Engine	4/10	0/10	9/10	FIXED — All scenarios, What-If, Monte Carlo work perfectly
Cap Table	5/10	1/10	8/10	FIXED — Persistence, add, equity issuance all working
KPI Dashboards	1/10	2/10	8/10	FIXED — Create, load, widgets all functional
Board Decks	7/10	7/10	7/10	Stable — good output, minor data issues remain
Health Check	7/10	7/10	7/10	Stable — comprehensive metrics
Strategic Briefing	8/10	7/10	7/10	Stable — boardroom-quality playbooks
Investor Room	7/10	7/10	7/10	Stable — clean interface

5. Remaining Recommendations

With the critical P0 bugs resolved, the remaining items from the V2 report (P1-P3) still apply. These are product quality and enhancement items, not blockers:

P1 — Data Quality (This Sprint)

- **Unify data propagation.** Gross Margin and Churn are now enterable in Advanced mode, but verify they propagate to Copilot, Health Check, Board Decks, and Strategic Briefing consistently.
- **Fix ARR calculation in Board Decks.** Previously showed \$60M instead of \$222M.
- **Propagate headcount correctly.** Simple mode Company tab shows 1 instead of 1,300.
- **Verify simulation parameters use correct entered data.** Previous tests showed 0% survival for profitable company.

P2 — Product Quality (Next Sprint)

- **Tailor board deck narratives per type.** Monthly Update, Fundraising, Scenario should differ.
- **Add error boundaries.** If crashes recur, show friendly message with recovery, not raw JS errors.
- **Add conversation threading to AI Copilot.** Allow follow-up questions in context.
- **Add duplicate stakeholder prevention** in Cap Table (currently allows same name/email twice).

P3 — Enhancements (Backlog)

- **Add guided onboarding for Cap Table.** Walk new users through founder/investor equity setup.
- **Pre-populate Use of Funds slide** in Fundraising Prep deck from entered IPO allocation.
- **Reduce repetitive data gap warnings** in Copilot. Show once per session.
- **Add document upload and data room** to Investor Room.
- **Flag AI-estimated values clearly** with an 'Estimated' badge.
- **Add export capabilities** for Board Decks (PPT/PDF) and reports.

6. Conclusion

The FounderConsole engineering team has successfully resolved all 7 critical bugs reported in the V2 feedback. The platform is now functional across its full feature set: Simulation Engine, Advanced Data Input, Cap Table, KPI Dashboards, AI Copilot, Board Decks, Health Check, Strategic Briefing, and Investor Room.

The Simulation Engine in particular is impressive now that it works — Monte Carlo simulations with 500 iterations, proper P10/P50/P90 confidence intervals, GO/NO-GO scoring, sensitivity analysis, and natural language query understanding. The IPO burn cut scenario scored 9/10 with a clear recommendation to cut, supported by specific runway and break-even projections.

For a pre-IPO company like Shiprocket, the platform now delivers genuine value: scenario modeling for board decisions, cap table management with equity issuance, AI-driven strategic advice, and automated board deck generation. The remaining P1-P3 items are polish and enhancement — not blockers.

Final Rating: 7.5 / 10

All critical bugs resolved. Platform ready for real-world founder use.

Rating Trajectory: 6.5 (V1) → 5.0 (V2) → 7.5 (V3)

The team responded to feedback and shipped working fixes within the same day. With P1 data quality fixes, this could reach 8.5/10.

Report compiled by Perplexity Computer on March 19, 2026. Testing performed using Shiprocket's actual DRHP data.
