Fix Verification Report

March 23, 2026

Re-testing all 13 previously reported issues across V3, V4, and Deep Audit reports

Prepared for

Vishesh Khurana

CONFIDENTIAL

Executive Summary

3 of 13

issues fully fixed (23% fix rate)

Status	Count	Issues
FIXED	3	Settings/Profile 404, Stress Test Differentiation, Fundraising Readiness Invalid Date
PARTIALLY FIXED	3	Score Calibration, Counter-Move Differentiation, KPI Dashboards
NOT FIXED	6	Simulation NLP Parsing, Flight Simulator Crash, Revenue Projection Realism, Digital Twin (worse), Floating Point Bug, Copilot Follow-ups
NEW REGRESSION	1	Digital Twin now fails to load entirely (was showing wrong data, now shows no data)

The stress test differentiation fix is the standout improvement — all 6 stress tests now show realistic, differentiated runway impacts (33mo to 82mo range). The /settings and /profile fixes resolve a critical trust issue. However, the 3 highest-impact issues (NLP parsing, score calibration, Flight Simulator) remain unfixed.

Detailed Test Results

TEST 1: Simulation NLP Parsing — NOT FIXED

Previous state:

- 3/5 ecommerce simulations showed "No changes from baseline"

Current state:

- ALL 3 re-test simulations still show "No changes from baseline".
- Shipping costs, COD returns, and competitor threat scenarios are not parsed into variable changes.
- The AI narrative remains generic — no mention of shipping, logistics, COD, or competitor dynamics.

Verdict: NOT FIXED — Core NLP parsing issue persists.

TEST 2: Score Calibration — PARTIALLY FIXED

Previous state:

- All simulations returned 7/10 GO regardless of scenario

Current state:

- Scores now range from 7/10 to 8/10. Minor differentiation exists.
- However, ALL scenarios still return "GO" — no CAUTION or NO-GO for explicitly negative scenarios.
- Competitor taking 20% of customers still gets 7/10 GO.

Verdict: PARTIALLY FIXED — Minor improvement, not meaningful differentiation.

TEST 3: Flight Simulator — NOT FIXED

Previous state:

- Crashed with "monthly_burn must be >= 0" validation error

Current state:

- Identical crash. Same error message.
- The API still rejects negative burn values.

Verdict: NOT FIXED — Flagship feature remains completely broken.

TEST 4: Revenue Projection Realism — NOT FIXED (Regression)

Previous state:

- \$400M+ revenue projected for \$18.5M MRR / 0% growth company (too high)

Current state:

- \$7.15M revenue projected at 18 months (too low — should be ~\$18.5M monthly).
- The prior over-estimation bug has been replaced with an under-estimation bug.
- Baseline shows \$0 revenue at 24mo for a company doing \$18.5M MRR.

Verdict: NOT FIXED — New regression: different but equally wrong.

TEST 5: Digital Twin — REGRESSION

Previous state:

- Showed \$500K cash vs dashboard's \$35M (wrong data)

Current state:

- "Failed to load Digital Twin data" — complete loading failure.
- Went from wrong data to no data at all.

Verdict: REGRESSION — Now fails to load entirely.

TEST 6: Settings / Profile — FIXED

Previous state:

- Both /settings and /profile returned 404. No logout button.

Current state:

- /settings loads with profile info, password change functionality.
- /profile redirects to /settings correctly.
- Logout "Sign Out" button exists in top-right avatar dropdown ("V" initial).
- User avatar visible.

Verdict: FIXED — All settings/profile issues resolved.

TEST 7: Fundraising Readiness — FIXED

Previous state:

- "Invalid Date to Invalid Date (~months)" and "Runway: 0 months"

Current state:

- Optimal Raise Window shows "February 2027 to May 2027 (~4 months)".
- Runway data shows meaningful values. Banner says "100% survival with 240+ month runway."
- Remaining minor issue: MoM Growth still shows 0.0% vs dashboard's 10% (data source inconsistency persists but critical bugs are fixed).

Verdict: FIXED — Critical bugs resolved, minor inconsistency remains.

TEST 8: Floating Point Bug — NOT FIXED

Previous state:

- Gross Margin displays as 82.43243243243244%

Current state:

- Gross Margin still displays as 82.43243243243244%.
- Identical 20-digit floating point artifact.

Verdict: NOT FIXED — One-line fix still not applied.

TEST 9: Stress Test Differentiation — FIXED

Previous state:

- All 6 stress tests showed "60mo → ∞" (identical)

Current state:

- All 6 now show differentiated impacts:
- Mild Recession: 60mo → 51mo (-9mo)
- Severe Downturn: 60mo → 34mo (-26mo)
- Funding Winter: 60mo → 56mo (-4mo)
- Key Customer Loss: 60mo → 33mo (-27mo)
- Competitive Disruption: 60mo → 42mo (-18mo)
- Hiring Freeze: 60mo → 82mo (+22mo)

Verdict: FIXED — Excellent improvement, all stress tests show realistic differentiated impacts.

TEST 10: Counter-Move Differentiation — PARTIALLY FIXED

Previous state:

- All counter-moves showed identical 120.0mo / 100% survival

Current state:

- Three different runway values now appear (163.8mo, 186.2mo, 240.0mo).
- However, same counter-move outcomes appear regardless of simulation scenario.
- "Cut Costs 20%" shows -53.8mo delta (counterintuitive — cutting costs should extend runway).
- All survival remains 100% with Opp change.

Verdict: PARTIALLY FIXED — Differentiated values but logic issues remain.

TEST 11: Copilot Follow-ups — NOT FIXED

Previous state:

- Both questions got identical follow-up: "What are your CAC and LTV?"

Current state:

- Both questions still get identical follow-up: "What are your customer acquisition costs and lifetime value?" (slightly reworded but same content).
- Positive note: Copilot response quality improved — references Truth Scan Run #356 and company-specific data.

Verdict: NOT FIXED — Follow-up suggestions still template-based.

TEST 12: KPI Dashboards — PARTIALLY FIXED

Previous state:

- Dashboards not visible / empty

Current state:

- Two named dashboards appear in list ("Shiprocket IPO Tracker", "Shiprocket Executive KPIs").
- But clicking into either shows empty canvas — "Start Building Your Dashboard".

Verdict: PARTIALLY FIXED — Cards visible, content still empty.

TEST 13: Cap Table — NOT FIXED

Previous state:

- 13/14 stakeholders at 0.00% ownership. 409A FMV shows "--"

Current state:

- Identical — 13 stakeholders still at 0.00%, only Saahil Goel at 100%.
- 409A still shows "--".

Verdict: NOT FIXED — No change from previous audit.

Updated Platform Score

Area	V3	V4	Deep Audit	Current	Change
Simulation Engine	—	—	5/10	5.5/10	+0.5
AI Copilot	—	6/10	3/10	3.5/10	+0.5
Dashboard / Overview	—	8/10	8/10	8/10	=
Fundraising CRM	—	5/10	5/10	6.5/10	+1.5
Cap Table	—	6/10	6/10	6/10	=
Health Check	—	7/10	7/10	7/10	=
Alerts	—	6/10	6/10	6/10	=
Settings / Profile	—	0/10	0/10	8/10	+8.0
Content / Copy	—	6/10	—	6/10	=
Visual Design	—	8/10	8/10	8/10	=
Flight Simulator	—	—	2/10	2/10	=
Digital Twin	—	—	2/10	0/10	-2.0
OVERALL	7.5/10	6.5/10	5.1/10	5.5/10	+0.4

Priority Fix List

What must be fixed next, in order of impact:

Priority	Issue	Why It Matters Most	Effort
P0-1	NLP scenario parsing	60% of simulations produce garbage results. Core product value is broken.	HIGH
P0-2	Score calibration	Tool that always says "GO" is dangerous. Trust-destroying.	MEDIUM
P0-3	Flight Simulator burn validation	Flagship differentiating feature crashes for all real companies.	LOW
P0-4	Floating point display	82.43243243243244% visible to every user on every session.	LOW
P1-1	Revenue projection calibration	New regression — \$7M projected for \$18.5M MRR company.	MEDIUM
P1-2	Digital Twin data loading	Now fails completely (regression from wrong data to no data).	MEDIUM
P1-3	Copilot follow-up suggestions	Same template for every question reduces perceived intelligence.	LOW
P1-4	Counter-move scenario context	Same results regardless of simulated scenario.	MEDIUM

Bottom Line

3 of 13 issues fixed. The stress test fix is excellent. Settings/profile/logout is a critical trust fix. Fundraising readiness dates are resolved.

But the 3 issues that matter most — NLP parsing, score calibration, and Flight Simulator — remain broken. These are the core product: simulate a scenario, get an honest recommendation, see agents make decisions. Until these work, FounderConsole is a well-designed dashboard with a broken simulation engine.

Updated score: 5.5/10 (up from 5.1). Next milestone: fix NLP parsing + score calibration to reach 7.0+.
