Key Findings

Key Findings

Termina's models processed Stashfin's data discovering several key findings.

Stashfin is a digital lending platform in India that leverages technology to offer quick personal loans, credit lines, and prepaid cards with flexible repayment options, catering to salaried and self-employed individuals seeking accessible financial solutions.

Stashfin has struggled in the past year, exhibiting superlinearly contracting revenue, falling loan disbursement volumes and declining consumer numbers. The company has responded with longer term loans, producing greater revenue per customer as consumer count dwindles, and with a rise in monthly interest rates. Despite these measures, the revenue decline is projected to continue to accelerate over the coming year.

1. **Total revenue** in September was **\$5M** (\$63M run rate). **CMGR12** was **-3.7%**, benchmarking in the **bottom quartile**. **Underlying disbursal volume dropped steeply** this year, with \$47.6M disbursed in January and \$28.4M disbursed in September. Revenue contraction will continue to accelerate as the prolonged effects of the declining loan volume is realized.
2. Total consumers have declined every month since June 2023. **Consumer CMGR12** is **-4.1%**, representing a 0.6x year-over-year contraction.
3. Quarterly **gross margin** was **19.3%**, benchmarking in the **bottom quartile**. Gross margin fluctuates heavily as defaults are acknowledged. Typical gross margin performance is poor against other consumer loan companies mainly due to a comparably high default volume.
4. Quarterly **operating margin** was **3.1%**, benchmarking **above median**. Operating margin has fallen in recent months as revenue contracts.
5. Cohort LTVs are sublinear. **LTV12** averaged **\$80.6**.
6. **Total loan interest rates have sharply increased through 2024**. While monthly loan disbursement volume has dropped 40%, monthly booked interest remains similar as **both loan durations and monthly interest rates have increased to compensate**.
7. Unit efficiency has sharply dropped as customer acquisition has slowed, causing a spike in CAC in recent months. Average gmLTV12/CAC across all matured cohorts is >10x, however the projected quarterly **gmLTV12/CAC** is **1.9x**, benchmarking in the **bottom quartile**.

- **What the business does:** Stashfin is a digital lending platform based in India that offers quick and accessible personal loans to individuals. Leveraging technology and data analytics, the company streamlines the loan application process, providing users with a transparent and efficient borrowing experience.
- **What they sell:** Stashfin provides a range of financial products, including personal loans, credit lines, and prepaid cards. These offerings are designed to cater to various financial needs, such as emergency expenses, home renovations, or debt consolidation. The platform emphasizes user-friendly features, including quick approval times and flexible repayment options, to enhance customer convenience.
- **Who their customers are:** Stashfin primarily serves salaried professionals and self-employed individuals in India who require immediate financial assistance. The platform appeals to customers seeking a hassle-free borrowing process, especially those who may find it challenging to secure loans through traditional banking channels. By focusing on user experience and accessibility, Stashfin aims to meet the financial needs of a diverse customer base.

Key Findings

Monthly revenue has declined in the past year. The contraction is projected to accelerate as disbursement volume falls.

- In September 2024, Revenue was \$7.7M (\$92.0M run rate).
- Revenue CMGR 3/6/12 was -7.9/-5.0/-3.7%.
- Implied year-over-year growth was 0.4/0.5/0.6x.

Key Findings

Monthly loan disbursement volume has declined. Active loan volume is falling at an accelerating rate as the disparity between expiring and new volume grows.

- As of September 2024, GTV (loans disbursed) was \$28.4M (\$340.8M run rate) with CMGR 3/6/12 of -2.55/-4.24/-5.55% and implied Y/Y growth of 0.73x/0.59x/0.50x.
- Loan disbursement has fluctuated but generally trended lower, with total dollars disbursed now over \$1,319.6M.

Total consumers have declined for the past year.

- In September 2024, there were 320k total consumers.
- The CMGR 3/6/12 was -3.9/-3.7/-4.1%.
- Implied year-over-year (YoY) growth was 0.6x/0.6x/0.6x.

Key Findings

Operating margin benchmarked above median at 3.1%, however is falling under declining revenue.

- In September 2024, Annualized Revenue (Rolling Q) was \$69.7M.
- Operating Margin (Rolling Q) was 3.1% (typical performance).
- Compared with other loan_b2c companies at similar revenue. Live benchmarks are available online for [fintech](#), [loan_b2c](#), and [qtv](#) categories.

- Monthly LTV3 averaged \$27.2.
- Monthly LTV6 averaged \$46.3.
- Monthly LTV12 averaged \$80.6.

Key Findings

Interest payment per loan has increased sharply. This is due to an increase in both loan durations and monthly interest rates.

Interest Rate Distribution

- Loan interest rates have sharply risen through 2024. Size normalized interest averaged 38.5% in September, while it was 27.3% in January.
- Despite disbursal volume dropping dramatically from \$47.6M to \$28.4M since January, booked interest has remained more level, falling from \$13M in January to only \$11M in September.
- The main contributor to increasing total interest are longer loan terms, which are up 20%. Average monthly interest rates have also increased, up 14.6% since January.

Key Findings

Future interest from long duration loans make up a significant proportion of projected revenue, leading to uncertainty around future payback.

Loan breakdown by components

- Projected contribution in September is \$7M, however this figure heavily relies the future default rate.
- The net earned shows future contribution projections under the current weighted average default rate.
- Some of the future interest is contributed by defaulted long term loans which are not yet regarded as defaulted.

Key Findings

Unit efficiency has dropped significantly in 2024 as acquisition rate has stagnated. gmLTV12/CAC benchmarked bottom quartile.

- In September 2024, the 3/6/12 month contribution averaged -\$23.7/-10.7/7.2 in the latest quarter.
- Weighted across all cohorts, 3/6/12 month Contribution was \$3.7/9.3/19.4.
- Weighted across all cohorts, 3/6/12 month gmLTV was \$12.3/17.8/27.0.

Note: The rolling contribution includes slight projections for recent cohorts. Lifetime metrics are computed by weighting them by cohort size and averaging over all cohorts that reached the specified period. As a result, the estimates may vary slightly from those in the summary table.

Loan Analysis

- The following section looks at loans organized by disbursal month and seeks to understand behaviours and trends in Stashfin's loan activities.
- The company exhibits a contracting loan book in the past year. As monthly disbursements continue to fall, the active loan volume is dropping superlinearly as the disparity between expiring volume and new volume grows, reflected by the steadily declining CMGR12 in Stashfin's financials.
- Given the volume in long term loans, the full effects of the decline in the past year is not yet fully realized but will be more apparent in the coming years.
- To compensate for these issues, loan terms have increased, giving the company more total revenue per customer as consumer acquisition recedes. Monthly interest rates have also risen 14.6% since January to supplement falling revenue.
- There are no notable changes in disbursal amounts per loan nor default rates. Default rate is currently falling however is historically in flux.
- Loan contribution is heavily dependent on future interest from long duration loans. Contribution performance is uncertain because of this, and is projected to be level at current default frequency.

Loan Disbursement Volume

- As of September 2024, GTV (loans disbursed) was \$28.4M (\$340.8M run rate) with CMGR 3/6/12 of -2.55/-4.24/-5.55% and implied Y/Y growth of 0.73x/0.59x/0.50x.
- Loan disbursement has fluctuated but generally trended lower, with total dollars disbursed now over \$1,319.6M.

- During the period from September 2023 to September 2024, mean loan amount has decreased, going from \$225 in September 2023 to \$171 in September 2024.
- Median loan amount was \$83, indicating heavy right skew in disbursement amounts.

- Median loan term duration has risen from 12 months to 15 months year-over-year in September.
- Mean loan term duration has also risen from 12 to 15 months over this period.

Interest Rate Distribution

- Loan interest rates have sharply risen through 2024. Size normalized interest averaged 38.5% in September, while it was 27.3% in January.
- Despite disbursal volume dropping dramatically from \$47.6M to \$28.4M since January, booked interest has remained fairly, falling from \$13M in January to only \$11M in September.
- The main contributor to increasing total interest is due to longer loan terms, which are up 20%. Average monthly interest rates have also increased, up 14.6% since January.

- Normalized monthly loan interest was 2.35% in September.
- Monthly loan interest is up 14.6% since January 2024 from 2.05%.

Default Rate

- We define a loan to have defaulted when its extended days past due reaches 90 days.
- The graph illustrates the company's loan default rates over time for loans which reached maturity, measured by both loans disbursed and deployed capital.
- The company's average lifetime default rate is 23.91% by loans disbursed and 12.33% by deployed capital.
- The graph shows data only for completed loans.

Total defaulted balance by cohort origination date

- An alternative view of looking at defaults is to look at the average dollars lost to default. The total outstanding balance lost to defaults is \$70.1M, which, when divided by the total amount of default loans of 969085 gives an average default balance of \$72.36.

Loan breakdown by components

- Projected contribution in September is \$7M, however this figure heavily relies the future default rate.
- The net earned shows future contribution projections under the current weighted average default rate.
- Some of the future interest is contributed by defaulted long term loans which are not yet regarded as defaulted.

Consumer Revenue PMF

- [Growth](#)
- [Cohorts](#)
- [Concentration](#)

- In September 2024, there were 320k total consumers.
- The CMGR 3/6/12 was -3.9/-3.7/-4.1%.
- Implied year-over-year (YoY) growth was 0.6x/0.6x/0.6x.

- In September 2024, month-to-month consumer retention was 92.4%.
- 7.6% consumers churned in the last month.
- Logo quick ratio was 0.3.

- In September 2024, there was \$5M total revenue (\$63M run rate).
- The CMGR 3/6/12 was -8.1/-5.9/-3.7%.
- Implied year-over-year (YoY) growth was 0.4x/0.5x/0.6x.

- In September 2024, the gross retention was 86.8%.
- Net churn was 10.6% (89.4% net dollar retention).
- The -10.3% revenue growth last month was -10.6% from net expansion and 0.4% from new consumers.
- Revenue quick ratio was 0.2.

- In September 2024, monthly growth was -10%.
- Contribution to that growth from new users was 0%.
- Net retention effect from existing consumers (or the negative of the net churn) was -11%.

— lifetime gross retention
— lifetime net dollar retention

— lifetime quick ratio

- Lifetime gross retention was 85.9%.
- Lifetime net churn was 6.1% (93.9% net dollar retention).
- Lifetime quick ratio was 1.2.

Lifetime metrics are the revenue-weighted average over all time.

- Monthly LTV3 averaged \$27.2.
- Monthly LTV6 averaged \$46.3.
- Monthly LTV12 averaged \$80.6.

- The monthly LTV13 has generally stayed constant.
- Monthly LTV3 averaged \$27.2.
- Monthly LTV6 averaged \$46.3.
- Monthly LTV12 averaged \$80.6.

- Monthly LTV3 averaged \$27.2.
- Monthly LTV6 averaged \$46.3.
- Monthly LTV12 averaged \$80.6.

- 3/6/12-month Consumer retention rates: 53.2/39.3/26.0%.

- 3/6/12-month Revenue retention rates: 66.4/55.4/45.2%.

Revenue Retention Heatmap

- 3/6/12-month Revenue retention rates: 66.4/55.4/45.2%.

- In September 2024, Median Revenue was \$12.2.
- Top 5 consumers were 0.0% of the total and spent at least \$278.6.
- Top 20% consumers were 48.3% of the total and spent at least \$24.3.
- Top 10% consumers were 30.9% of the total and spent at least \$33.4.

rank	consumer id	revenue	percent revenue	rank	consumer id	revenue	percent revenue

- In September 2024, the 3/6/12 month contribution averaged -\$23.7/-10.7/7.2 in the latest quarter.
- The 3/6/12 month gmLTV/CAC averaged 0.2/0.5/1.6x in the latest quarter.
- CAC was \$28.4 (+115% increase from last quarter's \$13.2, and +72% increase from last year's \$16.5).
- Lifetime CAC (average CAC of consumers ever) was \$8.8.

Note: The rolling metrics include slight projections for recent cohorts.

- In September 2024, the 3/6/12 month contribution averaged -\$23.7/-10.7/7.2 in the latest quarter.
- Weighted across all cohorts, 3/6/12 month Contribution was \$3.7/9.3/19.4.
- Weighted across all cohorts, 3/6/12 month gmLTV was \$12.3/17.8/27.0.

Note: The rolling contribution includes slight projections for recent cohorts. Lifetime metrics are computed by weighting them by cohort size and averaging over all cohorts that reached the specified period. As a result, the estimates may vary slightly from those in the summary table.

- In September 2024, the 3/6/12 month contribution averaged **-\$23.7/-10.7/7.2** in the latest quarter.
- Weighted across all cohorts, 3/6/12 month Contribution was **\$3.7/9.3/19.4**.
- Weighted across all cohorts, 3/6/12 month gmlTV was **\$12.3/17.8/27.0**.

Note: The rolling contribution includes slight projections for recent cohorts. Lifetime metrics are computed by weighting them by cohort size and averaging over all cohorts that reached the specified period. As a result, the estimates may vary slightly from those in the summary table.

- In September 2024, the 3/6/12 month contribution averaged -\$23.7/-10.7/7.2 in the latest quarter.
- Weighted across all cohorts, 3/6/12 month Contribution was \$3.7/9.3/19.4.
- Weighted across all cohorts, 3/6/12 month gmLTV was \$12.3/17.8/27.0.

Note: The rolling contribution includes slight projections for recent cohorts. Lifetime metrics are computed by weighting them by cohort size and averaging over all cohorts that reached the specified period. As a result, the estimates may vary slightly from those in the summary table.

- In September 2024, the 3/6/12 month gmLTV/CAC averaged 0.2/0.5/1.6x in the latest quarter.
- Weighted across all cohorts, 3/6/12 month gmLTV/CAC ratio was 2.7/3.9/5.8x.
- Weighted across all cohorts, 3/6/12 month LTV/CAC ratio was 6.8/≥10/≥10x.

Note: The rolling contribution includes slight projections for recent cohorts. Lifetime metrics are computed by weighting them by cohort size and averaging over all cohorts that reached the specified period. As a result, the estimates may vary slightly from those in the summary table.

Gross Margin LTV / CAC Ratio Heatmap

- In September 2024, the 3/6/12 month gmLTV/CAC averaged 0.2/0.5/1.6x in the latest quarter.
- Weighted across all cohorts, 3/6/12 month gmLTV/CAC ratio was 2.7/3.9/5.8x.
- Weighted across all cohorts, 3/6/12 month LTV/CAC ratio was 6.8/≥10/≥10x.
