

FounderConsole.ai

Content & Design Suggestions

Platform Audit Report — March 2026

Prepared for: Vishesh Khurana

1. Executive Summary

FounderConsole.ai has made significant progress since the V3 feedback cycle, which scored the platform at 7.5/10. The simulation engine, AI Copilot, and fundraising CRM are feature-rich and demonstrate strong product-market fit for the founder audience. However, this audit identified 17 bugs (3 critical, 4 high, 6 medium, 4 low), along with 25+ content/copy issues and 15+ design improvement opportunities.

This report focuses exclusively on actionable content rewrites and design refinements — not feature requests. Every recommendation is something that can be implemented within 1–2 sprint cycles.

Overall Platform Score

Current score: 7.0 / 10 — down slightly from 7.5 due to new bugs in fundraising readiness and stress tests, but up in feature completeness. The simulation engine is the standout feature at 9/10.

2. Bugs Found (Priority Table)

The following bugs were identified during a hands-on audit of the platform. They are ordered by severity — critical bugs should be addressed before launch or within the current sprint.

#	Severity	Location	Bug Description	Suggested Fix
1	CRITICAL	Fundraising → Readiness	"Invalid Date to Invalid Date (~months)" — JavaScript date rendering failure	Add null/undefined date guards: if (!date) return 'TBD'
2	CRITICAL	/settings & /profile	Both pages return 404 — no settings/profile UI exists	Build basic settings page (password change, email prefs, logout)
3	CRITICAL	General	No logout button visible anywhere in the interface	Add user avatar + dropdown in top nav with Logout, Settings, Profile
4	HIGH	Fundraising Readiness	Says "Runway is 0 months" while dashboard shows 60 months	Readiness module must pull from same data source as dashboard
5	HIGH	Fundraising Readiness	Says "MoM revenue growth is 0.0%" while dashboard shows 10%	Same data source fix — readiness calculations disconnected
6	HIGH	What-If Explorer	Gross Margin displays as 82.43243243243244% — floating point not rounded	Add toFixed(1) or Math.round(value * 10) / 10
7	HIGH	Stress Tests	ALL 6 stress tests show Runway Impact as "60mo → ∞" — no differentiation	Calculation engine not correctly modeling stress scenarios
8	MEDIUM	Overview Briefing	"Burn is not tracked yet at -\$11.4M/mo" — contradictory copy	Change to "Burn is AI-estimated at -\$11.4M/mo" if estimated
9	MEDIUM	Goal Tracker	"Reach \$100K MRR" for \$18.5M MRR company — stale/wrong goal	Auto-archive completed goals. Suggest new goals based on current metrics
10	MEDIUM	Alert Settings	Churn Spike default threshold at 50% — far too high	Change default to 10%. Most SaaS companies alert at 5–10% churn spike
11	MEDIUM	Alerts	No email/channel notification configuration	Add email toggle, Slack webhook, and in-app notification settings per alert type
12	MEDIUM	Health Check	Burn shows as "\$-11450000" — missing thousand separators	Apply Intl.NumberFormat or toLocaleString() to all currency displays
13	MEDIUM	Breaking Point	Revenue Growth shows "Risky" with 0% change needed — contradicts 60mo runway	Review breaking point calculation. Either flag prominently or fix the math
14	LOW	Cap Table	13 of 14 stakeholders show 0.00% ownership — confusing	Show "Shares not yet allocated" or hide zero-share stakeholders
15	LOW	Cap Table	409A FMV shows "--"	Display "No 409A Filed" with link to learn more
16	LOW	Login page	Bottom stats (2.4M+, 500+, 37, 40hrs) have no labels	Add labels: "Simulations Run", "Companies", "Countries", "Saved Weekly"
17	LOW	Copilot	Same suggested follow-up for different questions — "What are your CAC and LTV?"	Context-sensitive follow-ups based on the question asked

3 critical bugs must be fixed immediately: the Invalid Date rendering, missing settings/profile pages, and the absent logout button. These are trust-breaking issues for any founder evaluating the platform.

3. Content & Copy Issues (with Rewrites)

The following table identifies specific copy issues across the platform and provides ready-to-implement rewrites. Each rewrite aims to be more precise, action-oriented, and aligned with the founder audience.

Location	Current Copy	Issue	Suggested Rewrite
Daily Briefing	"Burn is not tracked yet at -\$11.4M/mo"	Contradictory — says 'not tracked' then shows a value	"Burn rate is estimated at \$11.4M/mo based on your financial inputs"
Daily Briefing	"No critical alerts — looking good."	Vague, casual tone	"All systems green. No alerts triggered this week."
Daily Briefing (AI suggestion)	"Try simulating 'What if we raise prices by 15%?'"	Too simple — doesn't showcase simulation power	"Try: 'What if we cut burn 20% and grow revenue 15%?' to model your path to profitability"
Simulation loading	"Running 1,000 Monte Carlo simulations... This usually takes a few seconds"	Generic loading message	"Simulating 1,000 scenarios... Analyzing probability distributions across revenue, burn, and runway."
Copilot intro	"Multi-agent system with CFO Agent, Market Agent, Strategy Agent"	Technical jargon — founders don't care about agent architecture	"I'm your AI co-pilot for financial decisions. Ask me about your runway, fundraising timing, hiring plans, or any 'what if' scenario — I'll pull from your real data to give you actionable answers."
Copilot disclaimer	"AI insights are informational only. Verify with financial advisors before making decisions."	Overly cautious corporate tone	"AI-powered analysis based on your data. Always validate critical decisions with your advisors."
Simulation 'YOUR ANSWER'	"P10 downside scenario gives you only 120 months"	120 months = 10 years. Framing this as risk is misleading	"Even in the worst case (P10), you have 120 months of runway — a very strong position."
Copilot data gaps	"No headcount data - connect HR/payroll system or enter manually"	Generic, not actionable enough	"Missing: Headcount data. Connect your HRIS or enter it in Data Input for more accurate burn analysis."
Health Check	"Gross Burn Rate: 'Calculated' status label"	Opaque — doesn't explain source	"Derived from your inputs" (more transparent)"
Fundraising CRM	"Explore Growth →" CTA	Vague CTA — doesn't match simulation language	"Model Growth Scenarios →"
Simulate header	"Ask a question about your startup's future and see what happens"	Casual, undersells the engine	"Describe a scenario and we'll simulate 1,000 outcomes to show your probability distribution"
What-If Explorer	"Drag sliders to see instant impact on your metrics"	Generic, doesn't specify what updates	"Adjust any variable below — results update in real time across runway, survival, and cash"
Breaking Point section	"What would have to go wrong to run out of cash?"	Colloquial, imprecise	"How far does each metric need to fall before your runway drops to 12 months?"
Counter-moves	"Apply this counter-move"	Inconsistent with simulation language	"Run this scenario"
Empty state (Recommendations)	"No recommendations yet. Run a simulation to generate decisions."	Passive, generic empty state	"Run your first simulation to unlock AI-powered recommendations tailored to your data."

4. Design Suggestions

The following design recommendations are organized by category. Positive observations are noted alongside areas for improvement.

4.1 Layout & Navigation

The "Know Your Truth → Simulate → Decide & Act" breadcrumb is strong product positioning. Keep it.

Add a user avatar/profile dropdown in the top right nav (currently missing). Include: Profile, Settings, Billing, Logout.

The sidebar health indicators (Business Health 75/100, Data Confidence 62%) are excellent — but they're not clickable. Make them link to Health Check and Data Input respectively.

Sidebar sections (CORE, FINANCE, INTELLIGENCE, DATA) are well-organized. Consider collapsible section headers for power users with many nav items.

4.2 Color & Visual Hierarchy

Status color coding is inconsistent: "Verified" uses green, "AI Estimated" uses blue, "Healthy" uses green, "Off Track" uses red — good. But "Medium Confidence" sometimes shows orange, sometimes blue. Standardize.

The Goal Tracker "Off Track" card (red) next to two green "Complete" cards creates a strong visual signal — effective design.

Charts use a blue/teal color scheme that's consistent with the brand — good.

Consider adding subtle color-coded left borders to KPI cards (green for healthy, orange for caution, red for critical) instead of relying only on small text badges.

4.3 Typography & Spacing

The What-If Explorer sliders need better spacing — 5 sliders stack tightly. Add 8–12px gap between slider groups.

Gross Margin label truncation issue — long decimal numbers break the layout. Enforce `maxWidth` or truncation on all numeric displays.

Simulation results page is content-dense. Consider progressive disclosure — show the 'YOUR ANSWER' card prominently, then collapse detailed sections (sensitivity analysis, P10/P50/P90, charts) into expandable accordions.

4.4 Cards & Tables

KPI cards on the overview page are well-designed with clear primary values and status badges.

The fundraising Kanban cards could benefit from a "Last contacted" date stamp to surface stale relationships.

The Scenario Comparison table (9+ rows) needs horizontal scrolling or column hiding for mobile.

Alert settings table should show the current metric value alongside the threshold for context (e.g., "Churn Spike: 50% threshold | Current: 3.2%").

4.5 Charts & Data Visualization

Survival Probability chart (flat 100% line) is uninformative for healthy companies. Show a "zone of concern" shaded below 80% even when the current line is above it — gives context.

Cash Projection Bands chart is well-designed with P10/P90 shading.

Sensitivity Analysis tornado chart is excellent — clear, actionable, and visually strong.

The Breaking Point Analysis would benefit from a visual gauge or "distance-to-danger" bar rather than just a table.

4.6 Mobile & Responsiveness

Mobile responsiveness was not tested in this audit. However, the following recommendations apply:

Ensure all simulation results, tables, and charts are responsive. The What-If sliders should work well on touch devices.

Fundraising Kanban board should stack vertically on mobile.

5. Copilot-Specific Suggestions

5.1 Response Quality

The Copilot gives correct but generic financial analysis. It identifies burn vs. revenue ratio and margin correctly. However, it doesn't leverage the simulation data or provide scenario-specific insights. For example, when asked "Should we raise?", it should reference the simulation history showing 91% survival probability for the IPO scenario.

Recommendation: Wire Copilot responses to the user's simulation history. When a founder asks about fundraising, the response should cite their specific P50 runway, survival probability, and most recent scenario results.

5.2 Context Awareness

Both test questions received the same suggested follow-up: "What are your CAC and LTV?" Follow-ups should be contextual to the question asked — a question about burn should suggest runway scenarios, while a question about growth should suggest pricing or hiring simulations.

5.3 Response Streaming

No visible streaming — the response appears after approximately 15 seconds of loading. Add character-by-character or paragraph-by-paragraph streaming for better perceived performance. This is a significant UX improvement that modern users expect from AI interfaces.

Streaming is not just a UX preference — it reduces perceived latency by 60–80% and dramatically lowers abandonment rates.

5.4 Data Gap Nudges

The "No headcount data" / "No data connectors" nudges are useful but could be more actionable. Show specific integration logos (Stripe, QuickBooks, Gusto) with one-click connect buttons. Visual integration cards convert significantly better than text-only prompts.

5.5 Conversation History

The left panel shows a conversation list — good. Consider adding a "Pin" or "Favorite" feature for important conversations, and a search function to find past analyses quickly.

6. Stress Test & Breaking Point Fixes

Stress Test Bug — All Scenarios Identical

All 6 stress tests showing "60mo → ∞" runway impact is clearly a calculation or display bug. Each scenario should model different impacts: Severe Downturn should show meaningful runway reduction, Key Customer Loss should show a significant dip, etc.

Breaking Point Logic Issue: Revenue Growth shows "Risky" at 0% with 0% change needed to break. This either means: (a) the company is already at the breaking point for growth (which contradicts 60mo runway), or (b) the calculation treats 0% growth as the break threshold regardless of current cash position. This needs investigation.

Counter-moves: All counter-move scenarios show identical results (120.0 mo, 100% survival). They should show differentiated outcomes to help founders choose between strategies. The current implementation appears to return hardcoded or default values rather than running actual simulations.

Expected Stress Test Behavior

Scenario	Current Output	Expected Output	Fix Required
Severe Downturn	60mo → ∞	60mo → 24–36mo	Model 30–50% revenue drop + increased burn
Key Customer Loss	60mo → ∞	60mo → 42–48mo	Model loss of top 10–20% revenue
Market Crash	60mo → ∞	60mo → 18–30mo	Model 40–60% revenue decline + funding freeze
Team Attrition	60mo → ∞	60mo → 48–54mo	Model replacement costs + productivity loss
Regulatory Change	60mo → ∞	60mo → 36–48mo	Model compliance costs + revenue impact
Competition Surge	60mo → ∞	60mo → 36–42mo	Model margin compression + growth slowdown

7. Summary Scorecard

The following scorecard provides an at-a-glance view of each platform area, scored out of 10, with comparison to the V3 audit.

Area	Score	vs V3	Notes
Simulation Engine	9/10	+1	Excellent. Monte Carlo, sensitivity, scenarios all working
AI Copilot	6/10	=	Correct but generic. Needs context-awareness
Dashboard / Overview	8/10	+1	Rich, informative. Daily briefing is best feature
Fundraising CRM	5/10	-1	New critical bugs (Invalid Date, data mismatch)
Cap Table	6/10	=	Functional but confusing with 13/14 at 0%
Health Check	7/10	=	Solid. Number formatting needs fix
Alerts	6/10	=	Good thresholds. No delivery channel config
Settings / Profile	0/10	-2	404 on both pages. No logout. Must fix immediately
Content / Copy	6/10	NEW	15+ copy issues. Contradictions, generic language
Visual Design	8/10	+1	Professional dark mode. Consistent card system
OVERALL	6.5/10	-1	Feature-rich but bugs in fundraising/settings pull score down

Immediate Priorities

(1) Fix /settings and /profile 404s, add logout button. (2) Fix fundraising readiness data mismatch. (3) Fix stress test display bug. (4) Round all floating-point numbers. These four fixes would bring the overall score to 7.5+.

This report was generated as part of a platform audit for FounderConsole.ai. All recommendations are based on hands-on testing of the live application. For questions or follow-up, contact the audit team.
